

PED PowerDocs
NEXT GEN COMMISSIONING SOFTWARE

PED PowerDocs is a state-of-the art turnover tool with the features and flexibility you need to **get your project started quickly and successfully**. Today's complex projects and tight schedules demand a modern and intuitive solution that can be customized to meet the specific needs and parameters of your **energy, industrial or manufacturing projects**.

The right software can improve your time-to-handover and the integrity of your punchlist. PowerDocs is next-gen software that converts hundreds of manual processes (pairing checklists to tags, etc.) to a streamlined, time-saving system that has **up-to-date and accurate data**, so the right teams can contribute and monitor progress.

The Power & Flexibility You Need

- Electronic document management
- Punch list management
- Enhanced project reporting
- Advanced database management
- A streamlined and highly accurate system to optimize turnovers
- Cloud server application based on Apple software
- Designed for Windows and Mac, with add on for iOS devices
- Hosted by Amazon Web Services for maximum security & reliability

THE OLD WAY

- ✗ Excel-based forms are handwritten by admins.
- ✗ Difficult to add, delete devices or change turnover pkgs
- ✗ System is not intuitive, high learning curve for access
- ✗ Turnover books contain handwritten test data
- ✗ Electronic copy held locally or on thumb drive
- ✗ Owners can only review books via hard copy
- ✗ Search punchlist etc. via hard copy, difficult to filter/sort
- ✗ Difficult access to 3rd party vendor reports
- ✗ Test equip. calibration data held in 3-ring binder or folder
- ✗ Need to carry hard copies of drawings in the field
- ✗ Months-long manual entry of equipment data into your CMMS
- ✗ Request for info on hard copy or limited electronic
- ✗ Project admin. changes result in incomplete or out-to-date books

VS.

- ✓ 'Smart' forms are database-linked, sharable between admins.
- ✓ Easily add/remove devices, move between turnover pkgs
- ✓ Easy user interface, logical flow through the program
- ✓ Clean and concise books, computer filled from database
- ✓ Color-printed books are thermo bound with secure pages
- ✓ Server-based with auto backups, no data loss fears
- ✓ Owner can review books electronically with read-only login
- ✓ 3rd party reports linked to actual test form for easy review
- ✓ Test equip. calibration data entered into database with scanned certificate, easily assigned to each test form
- ✓ Drawings available 24/7 and in the field on tablet
- ✓ Fast import of equipment data from PowerDocs to CMMS
- ✓ Request for info integrated into database
- ✓ Books are consistently complete and up-to-date

THE PowerDocs WAY

Comprehensive Features

- PED PowerDocs System List based on engineering documents with extensive owner input
- Scoped P&ID's (Piping and Instrumentation Drawings), scoped electrical one-lines
- Initial population of the database (based on system list, scoped drawings and engineering documents)
- 3 iPad's with OtterBox protection for use during the project no cost for normal wear & tear
- One week on-site program training; additional training optional
- System Turnover Packages (STP) at project end; color printed and thermo bound (not typical 3-ring binders)
- Searchable and filterable copy of the database on project completion
- 5 Server logins included (additional server logins available in blocks of 5, additional cost may apply)
- Associated server costs included
- Responsive off-site support from PED PowerDocs from project start to completion
